Panel of speakers seated at a table covered with a red cloth. Each speaker has a nameplate and a small flag of their respective country (Czech Republic or Norway). The table is equipped with microphones, water bottles, and laptops.

Panelists (from left to right):

- 14 Axel Mieland
Research Council of Norway
- 15 Jiří Bouška
Research Council of Norway
- 16 Alan M. Wilcher
Ministry of Education, Youth and Sports
Czech Republic
- 17 Vegar Andreassen
Research Council of Norway
- 18 Štěpán Obrtlík
Ministry of Education, Youth and Sports
Czech Republic
- 19 Tomáš Bouška
Conference moderator

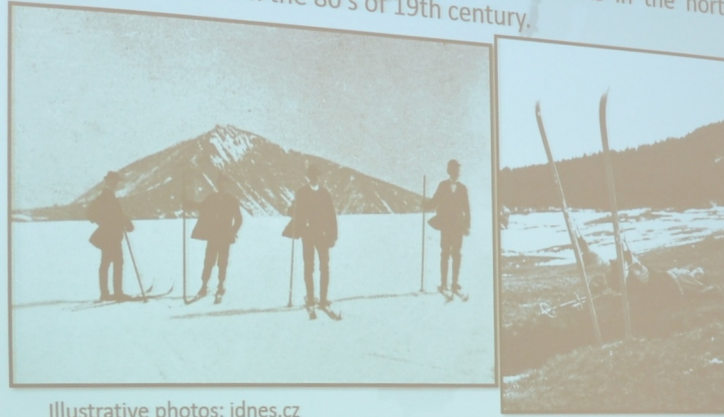

Contaminated Sites

- According to the report: "Progress in the management of Contaminated Sites in Europe" (*European Environment Agency*) there are about 2.5 million potentially contaminated sites in Europe, of which about 14% are expected to be contaminated and likely to require remediation.
- Contaminated soil continues to be commonly managed using 'traditional' techniques, e.g. excavation and off-site treatment and/or disposal, which accounts for more than 70% of management practices. However, increasing regulatory control of landfill operations and associated rising costs, combined with the development of improved *in-situ* remediation techniques, are altering the pattern of remediation practices.

A former Norwegian soldier brought first skis and promoted skiing in Rokytnice nad Jizerou in the Giant Mountains in the north-eastern Bohemia in the 80's of 19th century.
